We have got
the solution!

FLOWSERVE GESTRA

Eliminate frequent malfunction of your control valves in any of the following applications:

- Heating Steam Valve
- Feed Water Control Valve
- Feed Water Leak Off Valve
- Condensate Drain Valve
- Spray Water Control Valve
- Soot Blower Warm Up or Soot Blower Steam Valve
- Other critical service control applications

Power Plants all over the World made Gestra ZK – valves their first choice for real severe applications. Some of the properties of this valve range may explain why their choice is so logical:

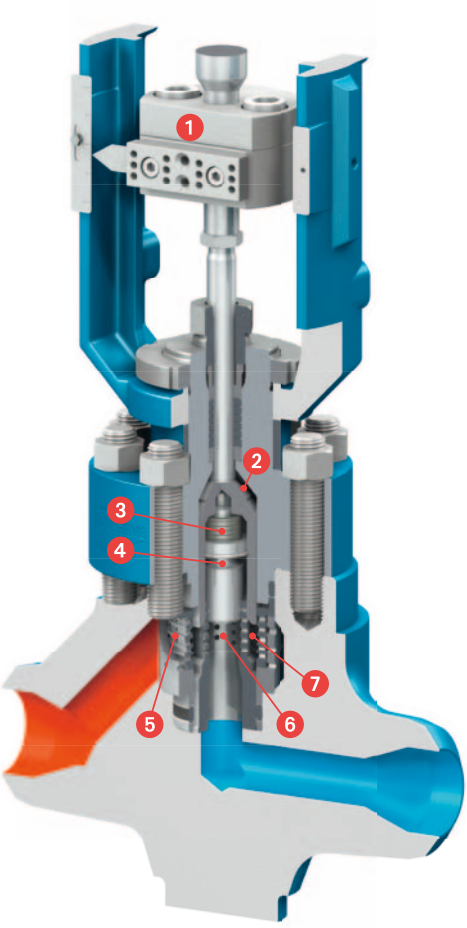
- Metal seated leakage class A according EN12266-1, respectively ANSI Class VI, bubble tight, due to special seat protection
- Special seat protection by control edge or tandem seat. A real difference in the opening and closing process
- Complete trim including the valve seat can be changed with the valve in-situ during scheduled maintenance
- Wear resistant ZK Radial Stage Nozzle for Δp up to 560 bar or 8120 psi
- Adjustable Cv values and control characteristics

Series ZK - A first class Valve

Designed for severe service, flashing water and high pressure drops. Special fitted designs enable a 100% replacement of existing, problematic valves. NO need to replace the complete piping installation, due to tailor made end connections.

While we are certain to provide a high class product, each ZK valve we designed for your application data comes along with a 3 year warranty period* on wear and tear.

* Terms & Conditions of the warranty will be based on the transferred design and application data.



1. *Actuator*
2. *Valve plug*
3. *Disc springs*
4. *Valve cone*
5. *ZK radial stage nozzle®*
6. *Secondary seat*
7. *Main seat*
